

RAKSHITH ACHARYA

SENIOR SOFTWARE ENGINEER | REACT NATIVE | ANDROID | TYPESCRIPT

Mangaluru, India • +91 70198 92499 • rakshithacharya75@gmail.com • linkedin.com/in/rakshith-acharya-640000181 • github.com/RakshithA1996

PROFESSIONAL SUMMARY

Senior Software Engineer with 5+ years of experience building and maintaining production-grade React Native and React applications for the EV mobility sector, including OCPP-based charging apps, Bluetooth/IoT vehicle integrations, and real-time TCP-based streaming systems. Strong native Android expertise (Java/Kotlin) across build systems, background services, and hardware SDK integrations, paired with proven front-end web development experience (React, TypeScript, JavaScript). Skilled at owning complex mobile engineering problems end-to-end — from BLE protocol debugging and Gradle/AGP compatibility to Redux state architecture and UI/design-system migrations — while collaborating closely with hardware, backend, and OEM partner teams. Currently expanding into full-stack development with Node.js, Express, PostgreSQL, Prisma, Redis, JWT, and Docker.

CORE COMPETENCIES

Mobile Engineering: React Native, React, TypeScript, JavaScript, React Navigation, Redux, Redux Toolkit, Context API, React Hooks & Memoization

Android: Android SDK, Java, Kotlin, Gradle/AGP, Android Studio, Native Modules, Background & Foreground Services

Connectivity & IoT: Bluetooth (BLE, react-native-ble-plx), TCP Sockets, OCPP Protocol, Firmware Updates, Location Services, Push Notifications

Backend & Cloud: Node.js, Express.js, PostgreSQL, Prisma ORM, Redis, JWT Auth, Docker, Swagger/OpenAPI, AWS Amplify, REST APIs

Engineering Practice: Debugging & Root-Cause Analysis, Performance Optimization, Dependency/Framework Upgrades, App Architecture, Production Support

Tools: Git, GitHub, VS Code, Android Studio, Ubuntu/Linux

PROFESSIONAL EXPERIENCE

ConnectM Technology Solutions Pvt. Ltd. — Bangalore

Dec 2021 – Present

Software Engineer (React Native Developer)

- Own and maintain a portfolio of production React Native/TypeScript EV mobile applications covering ride statistics and history, roadside assistance, service booking, and issue reporting, with Bluetooth-based firmware update workflows.
- Built an EV charging application implementing the OCPP protocol for station discovery, booking, and charge-session initiation — including a Redux-driven charging flow with real-time meter-value polling, stop-transaction handling, and a custom PanResponder-based connector slider.
- Developed a wallet module with paginated, month-grouped transaction history, plus an OTP-based authentication flow (react-native-sms-retriever) with VIN validation and active-session checks.
- Diagnosed and resolved BLE integration issues via react-native-ble-plx, including a characteristic-UUID conflict where a single UUID served both write and notify operations.

- Delivered an EV rental app for vehicle reservation and remote lock/unlock via IoT integration, a battery-swapping app over Bluetooth, technician apps for two OEM partners handling real-time damage tickets, and a screen-mirroring app streaming navigation maps over TCP sockets to in-vehicle displays.
- Led a UI/design-system migration for an OEM scooter app (cream-themed React Native design system across 6+ screens, HTML-to-RN conversion) and built theming plus QR scanning (react-native-vision-camera v4) for another OEM's charging-connect app.
- Resolved recurring Android/Gradle/AGP compatibility issues across React Native version upgrades (e.g., pinning AGP 8.3.2 / Gradle 8.6 for RN 0.80.2) and integrated native SDKs (Eryanet BLE/AP/P2P, HMS Scan Kit, Baidu Maps).
- Collaborated cross-functionally with hardware, backend, and OEM partner teams to ship reliable, production-grade mobile features.
-

Zelp Technologies

Jan 2021 – Nov 2021

Frontend Developer

- Built and maintained responsive web applications using React, JavaScript, HTML5, and CSS3, with a focus on UI optimization and modular, reusable components.
- Integrated RESTful APIs and implemented form validation, client-side routing, and state management.
-

SELECTED ENGINEERING HIGHLIGHTS

- Implemented real-time screen streaming between mobile devices and vehicle cluster displays using TCP sockets.
- Integrated multiple Bluetooth-based IoT features for EV firmware updates and vehicle connectivity, and was recognized for optimizing app performance using advanced React patterns (hooks, memoization).
-

EDUCATION

Master of Computer Applications (MCA) | RV College of Engineering, Bengaluru | 2017 – 2020 | CGPA: 8.43/10

Bachelor of Science (B.Sc.) | Dr. N.S.A.M First Grade College, Nitte | 2014 – 2017 | 76.88%

ADDITIONAL INFORMATION

Languages: English, Kannada, Hindi | **Target Roles:** Senior Software Engineer, Senior React Native Engineer, Senior Mobile Engineer
